### 3. Short circuit current ratings

Short circuit current capacity is calculated by IEC 60724, IEC 60949 and IEC 60986.

The relation between short circuit current capacity and duration of short circuit is determined as follows :

$$I^2 \times t = 226^2 \times S^2 \times \log_e \left[ \frac{\theta_1 + 234.5}{\theta_2 + 234.5} \right]$$

Short circuit current capacity, therefore, is calculated by following formula :

$$I = \sqrt{\frac{1}{t} \times 226^2 \times S^2 \times \log_e \left[ \frac{\theta_1 + 234.5}{\theta_2 + 234.5} \right]}$$

Where,

I : Short circuit current capacity (kA)

t : Duration of short circuit (S) : up to 5 s

S : Conductor nominal section area (mm<sup>2</sup>)

θ<sub>1</sub> : Short circuit conductor maximum permissible temperature : 250°C (EP rubber insulation cable)

θ<sub>2</sub> : Continuous conductor maximum permissible temperature : 250°C (EP rubber insulation cable)

## 5. Calculate of Voltage Drop

Calculate fomula

### 1) DC circuit

$$\text{Voltage drop rate} = \frac{R_{dc} \times 2L \times I}{V} \times 100(\%)$$

### 2) AC circuit

$$\text{Voltage drop rate of Single-phase A.C.} = \frac{R_{ac} \times 2L \times I}{V} \times \delta \times 100(\%)$$

$$\text{Voltage drop rate of Three-phase A.C.} = \frac{R_{ac} \times 2L \times I}{V} \times \frac{\sqrt{3}}{2} \times \delta \times 100(\%)$$

Where,

- L : Cable length (km)
- I : Current (A)
- V : Circuit Voltage (V)
- R<sub>dc</sub> : D.C. resistance at maximum rated Conductor temperature
- R<sub>ac</sub> : A.C. resistance at maximum rated Conductor temperature

## Handling, Installation Method & Notice

### ■ Loading & Transportation

#### 1. In case of a crane

Should transport by using standard rope and a shaft which is put in the center of drum.

\* Matters that requires attention

- Placing it even with the ground.
- Should move slowly and when it placedown, don't do sudden stop.

#### 2. In case of a forklift

Drums should not be damaged by a forklift.

\* Matters that requires attention:

- Place the drum on the center of a fork.
- The width of a fork should be longer than drum size.

### ■ Transportation and Unloading

\* Matters that requires attention while handling cables.

- Don't lie drums down.
- Don't move it 20m longer when rolling it.
- Don't use gimlets or something like sharp when moving.
- Don't roll a damaged drum.
- Don't roll at projecting surface.
- Don't store drum near to stove and heater.

## Check point while handling cables(Storage)

### ■ Storage

- Don't leave the protecting packing materials and outside package until remove it for setting up cables.
- Should construct a fence to protect against damages by moving machines.
- Keep it inside or in depository when safekeeping in long term.  
(For reference, drums and packages can stand against dry whether outside the house)
- Must seal both sides of cables remaining in the drums the cap and heat-contracting tube so that moisture doesn't soak in after finishing the removal of exterior packing materials and cutting and installing cables.
